Contents of Volume 132

Number 1, November 1991

Deactivation in Catalytic Hydrodemetallation. I. Model Compound Kinetic Studies Barbara J. Smith and James Wei	1
Deactivation in Catalytic Hydrodemetallation. II. Catalyst Characterization Barbara J. Smith and James Wei	21
Deactivation in Catalytic Hydrodemetallation. III. Random-Spheres Catalyst Models Barbara J. Smith and James Wei	41
Magnesia-Supported Nickel Catalysts. I. Factors Affecting the Structure and Morphological Properties F. Arena, B. A. Horrell, D. L. Cocke, A. Parmaliana, and N. Giordano	58
Kinetic Study of Ethylene Dimerization Catalyzed over $\text{Ti}(\text{O}-n\text{C}_4\text{H}_9)_4/\text{AlEt}_3$ Tae W. Woo and Seong I. Woo	68
Isopropylation of Benzene over Large-Pore Zeolites: Activity and Deactivation Studies A. R. Pradhan and B. S. Rao	79
A Low-Temperature IR Spectroscopic Study of Selective Adsorption of NO and CO on $\text{CuO}/\gamma\text{-Al}_2\text{O}_3$ Yilu Fu, Yangchao Tian, and Peiyan Lin	85
Oxygen Surface Species on Lithium Nickelate Methane Coupling Catalysts and Their Interaction with Carbon Oxides G. D. Moggridge, J. P. S. Badyal, and R. M. Lambert	92
The Oxidative Dehydrogenation of Isobutyric Acid to Methacrylic Acid on Ion Exchange Modified 12-Heteropoly Oxometalates G. B. McGarvey and J. B. Moffat	100
Partial Oxidation of Methane to Carbon Monoxide and Hydrogen over a $\text{Ni}/\text{Al}_2\text{O}_3$ Catalyst Dhammike Dissanayake, Michael P. Rosynek, Karl C. C. Kharas, and Jack H. Lunsford	117
Vanadia Catalysts on Anatase, Rutile, and $\text{TiO}_2(\text{B})$ for the Ammoxidation of Toluene: An ESR and High-Resolution Electron Microscopy Characterization Mehri Sanati, L. Reine Wallenberg, Arne Andersson, Susan Jansen, and Yanping Tu	128
Adsorption Sites on $\text{Pd}/\text{Al}_2\text{O}_3$ Edward C. Hsiao and John L. Falconer	145
Catalytic Cooperation between MoO_3 and Sb_2O_4 in N-Ethyl Formamide Dehydration. I. Preparation, Characterization, and Catalytic Results Bing Zhou, Edgardo Sham, Tadeusz Machej, Patrick Bertrand, Patricio Ruiz, and Bernard Delmon	157
Catalytic Cooperation between MoO_3 and Sb_2O_4 in N-Ethyl Formamide Dehydration. II. Nature of Active Sites and Role of Spillover Oxygen Bing Zhou, Tadeusz Machej, Patricio Ruiz, and Bernard Delmon	183
Catalytic Cooperation between MoO_3 and Sb_2O_4 in N-Ethyl Formamide Dehydration. III. Comparison of a Mathematical Model Based on the Remote Control Mechanism with Experimental Results F. Melo Faus, B. Zhou, H. Matralis, and B. Delmon	200

Kinetics of the Hydrogen–Oxygen Reaction on Platinum	
B. Hellsing, B. Kasemo, and V. P. Zhdanov	210
Spectroscopic and Physicochemical Characterization of P-Modified H-ZSM-5	
G. Lischke, R. Eckelt, H.-G. Jerschewitz, B. Parltz, E. Schreier, W. Storek, B. Zibrowius, and G. Öhlmann	229
<i>In Situ</i> IR Spectroscopic Study of the Surface Species during Methylation of Toluene over HZSM-5	
Gabriele Mirth and Johannes A. Lercher	244

Notes

About the Nature of Hydrogen Activation on Unsupported Ruthenium Sulphide	
S. Yuan, T. Decamp, M. Lacroix, C. Mirodatos, and M. Breyse	253
The Synthesis of HCN in a Solid Electrolyte Cell	
Nikolas Kiratzis and Michael Stoukides	257
ESR Investigations of Sulfuric Acid Catalyst Deactivation	
K. M. Eriksen, R. Fehrmann, and N. J. Bjerrum	263
Temperature Programmed Surface Reaction of Methylcyclopentane on Pd/NaY and Pd/HY	
Xinlai Bai and Wolfgang M. H. Sachtler	266
Aromatization of <i>n</i>-Hexane by Pt Clusters Supported on High Surface Area MgO	
Robert J. Davis and Eric G. Derouane	269

Number 2, December 1991

Adsorption of NO and CO on Rh/ZrO₂(100)	
G. S. Zafiris and R. J. Gorte	275
Methane Oxidation over Alumina-Supported Noble Metal Catalysts with and without Cerium Additives	
Se H. Oh, Patricia J. Mitchell, and Robert M. Siewert	287
Monte Carlo Modeling of a Simple Catalytic Reaction Mechanism: Comparison with Langmuir Kinetics	
L. V. Lutsevich, V. I. Elokhin, A. V. Myshlyavtsev, A. G. Usov, and G. S. Yablonskii	302
H₃PMo₁₂O₄₀-Doped Polyacetylene as a Catalyst for Ethyl Alcohol Conversion	
J. Poźniczek, I. Kulszewicz-Bajer, M. Zagórska, K. Kruczała, K. Dyrek, A. Bielański, and A. Proń	311
Phase Cooperation between Tin and Antimony Oxides in Selective Oxidation of Isobutene to Methacrolein. I. Mechanical Mixtures of SnO₂ and α-Sb₂O₄	
L. T. Weng, N. Spitaels, B. Yasse, J. Ladrière, P. Ruiz, and B. Delmon	319
Phase Cooperation between Tin and Antimony Oxides in Selective Oxidation of Isobutene to Methacrolein. II. Impregnated Catalysts	
L. T. Weng, B. Yasse, J. Ladrière, P. Ruiz, and B. Delmon	343

Phase Cooperation between Tin and Antimony Oxides in Selective Oxidation of Isobutene to Methacrolein. III. Coprecipitated Catalysts	
L. T. Weng, P. Patrono, E. Sham, P. Ruiz, and B. Delmon	360
Carbon Monoxide Adsorption by K/Co/Rh/Mo/Al₂O₃ Higher Alcohols Catalysts	
Elaine C. DeCanio and David A. Storm	375
Microcalorimetric Study of Oxygen Adsorption on Catalytically Promoted Gasification Chars	
A. S. Gow and J. Phillips	388
Influence of Oxygen in the Gas-Phase Hydrogenation of 2-Ethyl-Hexenal	
Ulf Schröder and Bengt Andersson	402
Primary Products in Catalytic Cracking of Alkanes: Quantitative Analysis	
Y. V. Kissin	409
Effect of Calcination Temperature of Alumina on the Adsorption/Impregnation of Pd(II) Compounds	
Ch. Sivaraj, Cr. Contescu, and J. A. Schwarz	422
On the Thermal Stability of Zeolite Beta	
Shang-Bin Liu, Jin-Fu Wu, Long-Ja Ma, Tseng-Chang Tsai, and Ikai Wang	432
Reduction of Nitric Oxide by Ammonia at Atmospheric Pressures over Platinum Polycrystalline Foils as Model Catalysts	
T. Katona, L. Guzzi, and G. A. Somorjai	440
Neopentane Reactions over Bimetallic Pt-Sn/Al₂O₃ and Pt-Au/SiO₂ Catalysts	
Krishnan Balakrishnan and Johannes Schwank	451
Adsorption Mechanism of Phosphoric Acid on γ-Alumina	
Jenny M. Lewis and Ronald A. Kydd	465
Mechanisms of C-C Bond Formation and Cleavage on Metal Surfaces: Formation of Butenes and Hexenes from Linear and Branched Pentenes over Ru/SiO₂ Catalysts	
Eloy Rodriguez, Michel Leconte, and Jean-Marie Basset	472
Titania-Supported Bimetallic Catalyst Synthesis by Photocatalytic Codeposition at Ambient Temperature: Preparation and Characterization of Pt-Rh, Ag-Rh, and Pt-Pd Couples	
Jean-Marie Herrmann, Jean Disdier, Pierre Pichat, Asunción Fernández, Agustín González-Elipe, Guillermo Munuera, and Christiane Leclercq	490
FT-IR and Solid-State NMR Investigation of Phosphorus Promoted Hydrotreating Catalyst Precursors	
Elaine C. DeCanio, John C. Edwards, Thomas R. Scalzo, David A. Storm, and Joseph W. Bruno	498
Alkylations of Benzene, Alkylbenzenes, and Halobenzenes Catalyzed by Protonated Mordenite Pretreated with Chlorofluorocarbons	
Hiroto Kodama and Susumu Okazaki	512
In Situ Cell for Combined XRD and On-line Catalysis Tests: Studies of Cu-based Water Gas Shift and Methanol Catalysts	
B. S. Clausen, G. Steffensen, B. Fabius, J. Villadsen, R. Feidenhans'l, and H. Topsøe	524

Stability of Bismuth Molybdate Catalysts at Elevated Temperatures in Air and under Reaction Conditions	
Thomas P. Snyder and Charles G. Hill, Jr.	536

Notes

Steady-State vs Non-Steady-State Transient Kinetic Analysis of Surface Coverages during the Oxidative Coupling of Methane	
Kevin P. Peil, James G. Goodwin, Jr., and George Marcelin.	556
A Pronounced Catalytic Activity of La–Cu Oxide Supported on ZrO₂ for Reaction between Nitrogen Monoxide and Carbon Monoxide	
Noritaka Mizuno, Mika Yamato, Mika Tanaka, and Makoto Misono	560
Correlation between the Infrared Band Frequency of the Silanol Bending Vibration in TiO₂–SiO₂ Catalysts and Activity for Acid Catalysis	
Jong Rack Sohn and Hyang Ja Jang.	563
Promoting Effects of Se on Rh/SiO₂ Catalysis for Ethene Hydroformylation	
Y. Izumi, K. Asakura, and Y. Iwasawa	566

Letters to the Editors

Comments on “Evaluation of Intrinsic Rate Parameters of the Fischer–Tropsch Synthesis.”	
G. H. Yokomizo, K. R. Krishna, and A. T. Bell	571
Response to Comments by Yokomizo et al	
A. A. Adesina	573

Author Index for Volume 132	575
Cumulative Author Index for Volumes 127–132	577
Cumulative Subject Index for Volumes 127–132	584

INFORMATION FOR AUTHORS

The *Journal of Catalysis* publishes articles dealing with original studies in heterogeneous and homogeneous catalysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of surfaces, and engineering studies related to catalysis. All articles will be published in English.

Submission of Manuscripts. Manuscripts should be sent by registered mail to either of the Editors:

Professor Gary L. Haller
Department of Chemical Engineering
P.O. Box 2159 Yale Station
Yale University
New Haven, Connecticut 06520

Professor Frank S. Stone
School of Chemistry
University of Bath
Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Catalysis* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. Submit manuscript (in English) in triplicate, including the original typewritten copy, with copies of all figures and tables. Originals of micrographs should also be submitted in triplicate for purposes of manuscript reviewing. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-in. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* should contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of title) not exceeding 45 letters and spaces, and the name and complete mailing address (and telephone and fax numbers, if possible) of the person to whom proof should be mailed. *Page 2* should contain a short abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

If the manuscript refers to recently submitted manuscripts or papers in press (with the *Journal of Catalysis* or other journals) then please supply three copies of them so that the reviewers can judge the new manuscript in its proper context.

Revised manuscripts should be returned with one copy marked to show where changes have been made.

Notes and Letters to the Editor may not exceed 8 double-spaced typewritten manuscript pages (including tables and figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must be related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on any topic, no more than one Letter from each author will be accepted.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Système International) system of units will be accepted without editorial change. Authors using other units are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures are quoted in Torr to write "1 Torr = 133.3 N m⁻²." For information concerning SI units, see *Quantities, Units and Symbols for Physical Chemistry*, 4th ed., prepared by I. Mills and published by Blackwell Scientific, Oxford, 1988.

Footnotes should be avoided if possible; but if essential, they should be designated by superscript Arabic numerals (starting with title) in the text.

Tables should be numbered with Arabic numerals in order of mention in the text. They should be typed double-spaced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the table. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

Figures should be numbered with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be in finished form suitable for reproduction. They should be planned to fit the proportion of the printed page (5.5 × 8 in.; column width, 2-5/8 in.). No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest structures and structural formulas must be designed for direct reproduction. Illustrations in color can be accepted only if the authors defray the cost.

Electron micrographs. Please supply three photographic copies of these so that the reviewers can inspect the fine details they contain.

References to the literature should be cited in the text by italic Arabic numerals in parentheses, set on the text line, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in *Chemical Abstracts' Service Source Index*, 1985. Style and punctuation of references should be in accordance with the following examples:

1. Latef, A., Aissi, C. F., and Guelton, M., *J. Catal.* **119**, 368 (1989).
2. Louis, C., and Che, M., in "Reactivity of Solids" (P. Barret and L. C. Dufour, Eds.), Vol. B, p. 1057. Elsevier, Amsterdam, 1985.
3. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an order form will be included with proofs.

Personal Computer Disks. Manuscripts may be submitted to the *Journal of Catalysis* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Associate Director, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

The AMI-1... providing a world of information for catalyst characterization

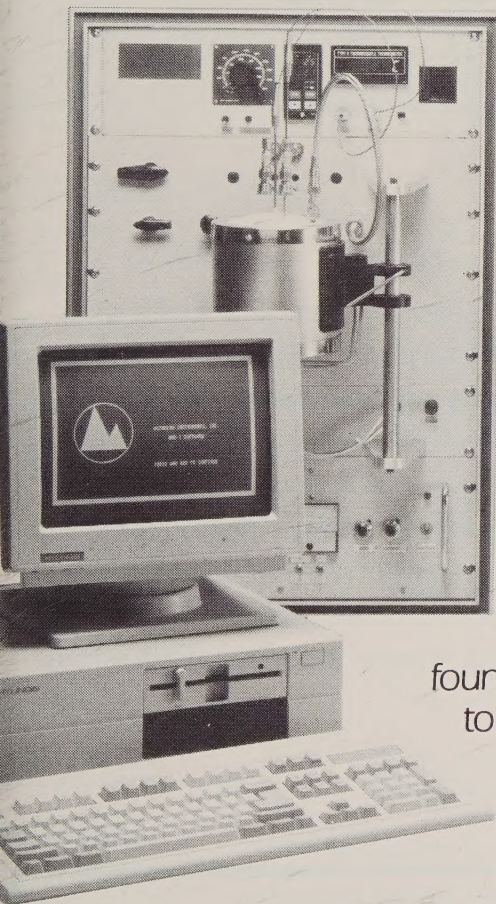

More than just a chemisorption apparatus, the AMI-1 is a characterization system that simplifies the study of catalyst surface properties. Seven flow and pulse techniques generate comprehensive information about your catalysts.

The AMI-1 enables you to:

- measure kinetic & thermodynamic parameters of adsorption/desorption processes
- study surface site heterogeneity
- fingerprint catalysts
- examine coverage-dependent phenomena
- generate reduction/oxidation profiles
- determine active metal surface area & total catalyst surface area
- determine pore size distribution

TPD, TPR, TPO, BET and chemisorption are only some of the techniques that you can perform with the system.

The AMI-1 reflects the innovative spirit of Altamira Instruments, a firm founded by catalyst researchers dedicated to meeting your professional needs.

Altamira Instruments

JOURNAL OF Colloid and Interface Science

Editor

Milton Kerker

Clarkson University, Potsdam, New York

Associate Editor

Josip P. Kratochvil

Clarkson University, Potsdam, New York

Publishing original research on fundamental principles and their applications, the **Journal of Colloid and Interface Science** is concerned with the work of investigators in relevant areas of chemistry, physics, engineering, biology, and applied mathematics. The journal features original research contributions from university, government, and industrial laboratories worldwide; book reviews; and letters to the editors.

Volumes 141–147 (1991), 14 issues

ISSN 0021-9797

In the U.S.A. and Canada: \$966.00

All other countries: \$1129.00
